DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 23 May 2008 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 10-11 rejected under 35 U.S.C. 102(b) as being anticipated by JP-08/217723.

JP'723 teach the use of branched fatty acid esters of polyglycerols, with a polymerization degree ranging from 2 to 18, and an esterification degree ranging bet 60-90%. Specifically, JP'723 teaches a polymerization degree ranging from 7 to 15 more in section [0006] and claim 1, branched fatty acids are taught in section [0007],

and the esterification level is taught in section [0009] and example 1 in section [0011].

Since JP'723 teaches branched fatty acids and an esterification level of higher than 60% it anticipates the fatty acid ester polyglycerol contained in the lipstick of the instant invention. Also it should be noted the reference is read in light of what it teaches one ordinary skill in the art and not the examples of specific embodiments. A reference isn't limited to its working examples, but must be evaluated for what it teaches one of ordinary skill in the art. JP'723 while exemplifying linear fatty acids teach branched fatty acids and linear fatty acids can be combined and used to produce a fatty acid ester polyglycerol that reads on the instant fatty acid ester polyglycerol.

Regarding the properties of the instant compounds, a compound and its properties are inseparable. Therefore the compounds in JP'723 would also exhibit the same properties of the instant invention. Also JP'723 teaches they conventionally known in the art to be used in cosmetics and drugs. To support this conventionally known fact, WO-01/62217 is submitted to show that at the time the invention was made it was conventionally known to use polyglycerol fatty acid ester in oil-based cosmetics such as lipsticks.
